ITALIAN DESIGN

FLEXIBILITY

SUSTAINABILITY

We successfully operate in the main markets of Europe, North America, South America and Asia, providing **cosmetics, personal care, food and parapharmaceutical/OTC industries** with a wide range of solutions standing out for their pleasant appearance and ease of use such as **Just Colours** and dual colour caps for all types of plastic packaging. Our **Eco Low Profile** line is designed and developed to minimize environmental impact, while **Classics** provide single-colour closure system with refined design, combining elegance and flexibility.

Following the global market's evolution, in recent years we have also developed our E-closures which are specific closures for our E-commerce customers. Our designs include two types of solutions: closures expressly designed by our GIFLOR LAB to comply with shipping requirements or a combination of our dispensing caps with liners, providing a "double-sealing" system that prevents leakage and contact with the external environment.

Our business is constantly evolving, however our goal has always remained the same which is to respond and exceed customer's needs. That is why we offer the companies who choose us, tailor-made solutions manufactured with style and technological innovations. We also provide the highest flexibility and excellence in service with fast and guaranteed delivery times.

FOCUS GROUPS

IDEAS PROTECTION

QUICK PROTOTYPING

MODULAR CREATIVE TEAM

TECHNOLOGY INTELLIGENCE

Giflor also stands out from its competitors because it really cares for the environment. We invest in the *future* of the planet we live on, which is why *sustainability is one of our key values*.

Every day we work hard to reduce our environmental impact through the use of *recyclable and recycled materials*, processed by the latest equipment that significantly reduces energy consumption and the amount of raw materials used.

# CLASSIC LINE

Classic shapes with a refined and timeless design: elegance and flexibility, pure Italian style. The Classics line is the bridge between past and future for Giflor, representing our company's 40-year history.

## The vast Classics range comprises highly reliable plastic bottle closures with a timeless design.

Available with two different dispenser openings, a glossy or satin finish (or a combination of both, as in the case of item 705 with satin base and glossy top), Screw-On or Snap-On coupling, Flip-Top or disc-top opening, the solutions in this line feature versatility and adaptability to any type of container, also offering the possibility of Top-Down use.

From small cylindrical closures for 50 ml bottles to the classic oval or mushroom-shaped tops, the Classics line is characterised by essential shapes and perfect tightness, guaranteed by the special plug seal (where featured), and is ideal for oily products. Another technical feature available in the range is the Crab Claw sealing system, which takes its name from its shape: this is a thin flexible gasket that compresses against the top sealing surface during capping. The Crab Claw acts as a gasket or liner and can be considered a universal seal, being adaptable to all closures for plastic bottles and allowing the use of any type of foil seal on the market.

The products in the Giflor Classics line are made from high quality materials and are supplied to the customer within four weeks from order.

*An additional liner, which is ideal for packaging in e-commerce, is available on request.*

*Customers can choose from over 350 standard colours available in our catalogue and customise the cap with a logo. Classics is a line of simple and functional closures for plastic bottles that offers the best solution for any customer request.*

ON GIFLOR.COM

Available with Screw-On or Snap-On coupling, flat or curved top, bore seal or Crab Claw seal, Giflor's two-colour closures for plastic bottles come in different shapes: oval, cylindrical and round.

### Just Colours is our line of closures that uses bi-injection technology to create two-colour caps.

**Bi-injection** is an advanced technique for moulding plastics, suited to manufacture items using two colours simultaneously, as well as two types of plastic.

Thanks to this solution, an almost **infinite number of combinations** can be created, thus responding to different labelling and bottle requirements in the field of cosmetics and personal care, as well as in other areas.

**Just Colors** closures enhance **brand identity** and give the packaging a **unique appearance** and prominence on the shelf, increasing the product's appeal in the eyes of the consumer. In addition to the **350 standard colours**, specific new combinations can be developed for a small surcharge.

Giflor's presses make production **more flexible, faster** and **more quality-oriented**, with exceptional results in terms of **aesthetics and style**. Our specialist technicians boast remarkable know how in the use of machinery, as well as craftsmanship in their care to details and customisations.

Made from polypropylene copolymer, a **recyclable material**, our two-colour caps for plastic packaging production also ensure **lower energy consumption** and **faster production** times compared to assembled closures, further reducing the environmental impact.

*On request, our two-colour caps for plastic packaging can also be equipped with a liner and customised with a logo. Great appeal, infinite colour combinations, chromatic shades and countless customisation possibilities are Giflor strength.*

# ECO LOW PROFILE

Nowadays, purchasing decisions are increasingly influenced by the packaging and the values/messages they are able to convey.

**According to recent research, in fact, around 70% of consumers are willing to spend a little more to buy an environmentally-friendly product, in terms of both the contents and the container.**

From food to healthcare and cosmetics, an environmentally-friendly package improves the perception of the product (and of the brand), making it more appealing in the eyes of the buyer.

Yet it is not only the consumer driving this change in outlook, as sustainable packaging is essential for all those companies that want to operate ethically and responsibly.

As a result of this commitment, in recent years Giflor has added the patented Eco Low Profile line for bottles and tubes to its range of injection-moulded plastic caps, thus pioneering a new trend. These products have been **designed and developed to minimise environmental impact**, both during the production process and in the final product and related supply chain.

Thanks to the reduction of weight and **compact size**, the **Eco Low Profile** solutions significantly **reduce energy consumption** during production and the amount of plastic used, as well as ensuring considerable **savings** and lower **logistics costs**. Furthermore, the entire plastic cap injection moulding process involves a **reduction in carbon dioxide (CO<sub>2</sub>) emissions** from the use of fossil fuels.

The ELP patented closure (Flip-Top closure for 50 mm diameter tubes with Snap-On coupling, item 772) represents **our most recent technological development in sustainable packaging**: thanks to its small size, this cap – **50% lighter than traditional caps** – brings huge savings in material and logistics management for the overall packaging.

*All the Eco Low Profile solutions are made with a Flip-Top opening and Snap-On coupling, with a glossy or matt finish. The injection moulding of plastic caps included in this range requires a **maximum of four weeks** from customer order.*

## E-commerce, whether B2B or B2C, shows significant growth throughout the world for all sectors.

The forecasts indicate that this business will continue to grow in the near future, reaching double-digit values by 2025.

This evolution will see the new digital generations, the so-called "Generation Y" and then "Generation Z", at the centre of the decision-making process. To meet the demand of the market, Giflor proposes a range of E-closures, designed with an eye to current and future market developments, with the aim of offering customers **plastic caps for e-commerce shipments** that comply with the specific needs of online commerce.

In fact, it is well known that e-commerce packaging must have some basic characteristics: provide safe storage in minimal space, maintain its integrity through the entire supply chain, be impact resistant, offer ease of handling/transport, and ensure no leakage under extreme conditions. Giflor's E-closures comply with all these parameters and are marketed as **high-standard packaging closures for e-commerce shipments**.

More specifically, we offer two types of **plastic caps for e-commerce shipments**. On the one hand, there are the solutions specially designed by our GIFLOR-LAB to comply with shipping requirements. For instance our version "Push&Lock" (art.560).

The other solution developed for those looking for high-standard packaging closures for e-commerce shipping is the combination of our Screw-On caps with a liner. Liners are membranes of different materials, types and diameters that are paired with the cap. They ensure the closure system is perfectly sealed and tight, preventing leaks and contact with the external environment.

The double-sealing system that combines the standard cap with the liner is compliant with the standards of all major online retailers around the world. Thus, Giflor's plastic caps for e-commerce shipments guarantee the absolute integrity of the package and of the product in any condition.

Giflor offers its customers various options for cap liners (IHS, Lift'n'Peel™, Pressure Sensitive, Edge Pull™), which can be used for both PET and PE/PP containers. The liners are available for our standard neck caps in the following sizes: 20/410, 20/415, 24/410, 24/415, 28/410, 38/400.

These closure systems are characterized by compactness, resistance to impact, safety (ensured by the "click-sound", which gives users the certainty that the cap is tightly closed), and refined design.
